#### **DETAILED ACTION**

This action is responsive to the amendment filed 11-16-2005, which has been entered. Claims 7-16 are currently pending.

#### **Drawings**

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, "the flow diameter gradually diminishes in the flow direction" as in claim 7, must be shown or the feature(s) canceled from the claim(s). No new matter should be entered. The drawing, specifically fig. 2 does not show the flowing diameter gradually diminishing. The change in diameter between diameters 9 and 10 are not gradual and is more like a step function.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement-drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner,

Application/Control Number: 10/667,215

Art Unit: 3682

the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### Claim Rejections - 35 USC § 103

Page 3

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 7-14 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP (10-141459) in view of Gazewood (6,199,566). JP (10-141459) discloses the claimed invention including cooling the belt (3) via a multi-jet nozzle (fig. 10). JP (10-141459) fails to disclose the flow diameter of the nozzle gradually diminishes in the flow direction between the first and second discharge openings. Gazewood discloses a multi-jet nozzle comprising a flow diameter (72/74) that gradually diminish between the two discharge openings (56) and 24) in order to vary the fluid discharge without dismantling the system of manually adjusting and to be able to cool different section that has various temperatures. Therefore, it would have been obvious to one of ordinary skill in the art at the time f the invention to modify the multi-jet nozzle of JP (10-141459) to include the limitation of Gazewood in order to vary the fluid discharge without dismantling the system of manually adjusting and to be able to cool different sections of the belt that is subjected to various temperatures.

In claim 10, note the flows diameters of Gazewood have different value for of the discharge openings.

Application/Control Number: 10/667,215

Art Unit: 3682

In claim 11, note JP (10-141459) device having first and second discharge openings (10/11).

In claim 14 and 16, JP (10-141459) and Gazewood disclose the claimed invention above.

In claim 12, JP (10-141459) discloses the claimed invention.

In claims 9 and 13, JP (10-141459) and Gazewood fail to disclose the range of the ratios of the oil volume for the first pulley pair to the second pulley pair. It would have been obvious to on of ordinary skill in the art at the time of the invention to modify the device of JP (10-141459) to obtain the claimed ration of oil volume flow to about 35:65 and about 40:60, since it has been held that where the general conditions of the claims are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. In re Aller, 105 USPQ 233.

## Allowable Subject Matter

4. Claim 15 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### Response to Arguments

5. Applicant's arguments filed 11-16-2005 have been fully considered but they are not persuasive. Applicant contended that Gazewood makes no reference to a CVT and the prior art to JP ('459) does not disclose the tubular members exposed to hash conditions and the nozzle comprises two separate nozzles. It should be noted that the claims are not directed to any harsh conditions and the CVT of (JP'459) would operated

**Art Unit: 3682** 

under the same conditions as the claimed invention. In addition, as disclosed in the rejection, the nozzle of JP '459 includes only one flow diameter (14) with two discharge ports (10, 11). However, the flow diameter of (JP '459) is one continuous diameter. Gaze was used to show that a flow diameter having a reducing function between the discharge ports. The rejection was not used to replace the nozzle of JP ('459) with the nozzle of Gazewood and was based on the knowledge of one skilled in the art to modify the nozzle of JP '459) with a flow diameter having a reduce function between the discharge ports. Therefore, for reasons given above, the rejection is deemed proper.

#### Conclusion

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

7. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Marcus Charles whose telephone number is (571) 272-

7101. The examiner can normally be reached on Monday-Thursday 7:30 am to 6:00

pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Ridley Richard can be reached on (571) 272-6917. The fax phone number

for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
